

Nova Mag-S

Boost chlorophyll level and aminoacids synthesis

Nova Mag-S 0-0-0+16MgO+32SO_3 is ICL's magnesium sulphate fertilizer with fully soluble and high purity nutrients that quickly dissolve in water.

Nova Mag-S is a high quality product for use in fertigation, completing the plant needs with its nutrients. It contains important nutrients for plant growth: magnesium plays a key role in photosynthesis, and sulphur is an indispensable element in aminoacids synthesis.

Guaranteed analysis	
16%	Magnesium oxide (MgO), water soluble
32%	Sulphur trioxide (SO_3), water soluble

Recommended dilution rate for stock solutions
10-15 kg / 100 liter water

** For more specific recommendations please contact ICL or your local distributor!*

Benefits

- Highly efficient source of magnesium and sulphur increasing chlorophyll and aminoacids synthesis.
- The product is nitrogen-free, which helps to adjust the fertigation program, matching the plants needs for magnesium and sulphur.
- Fully soluble and dissolves quickly.
